Bitcoin Certificate

Timestamp

Oct 12, 2026, 01:13:19 PM

Data Hash:
0x34efa60248e1b85be65bba06978363d669e0d47b1b9e15c1f1b22c1c63b759ec

Blockchain Transaction Link:
0xcc5cb7f901f69279ceade112e2d5480ba061c5f05a591e5e0dae4178865bed4a

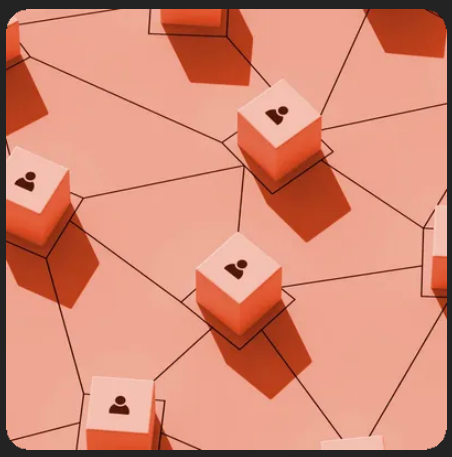

Root Hash:
0xebff5a0961d061e7032259e0b04cf0a69550d134b762f10c4e84df788dabf6a3

This certificate is only valid in combination with the original file and OriginStamps open procedure.

VERIFICATION

OriginStamp creates tamper-proof timestamps by embedding a cryptographic fingerprint of your data into the blockchain. Your original files remain private and are never uploaded.

1. Generate SHA-256 Hash

Calculate the SHA-256 fingerprint of your original file using any standard tool.

2. Validate Proof

Open your proof file in a text editor and ensure it contains your file's SHA-256 hash.

3. Determine Root Hash

OriginStamp uses a Merkle Tree to aggregate multiple hashes into a single Root Hash. If the calculated Root Hash matches the one on the blockchain, the integrity is verified.

19%

of data breaches involve stolen credentials, requiring independent file verification.*

4. Locate Bitcoin Transaction

The Root Hash is permanently recorded in the Bitcoin blockchain within an OP_RETURN transaction.

5. Verify Timestamp

The block time of this transaction serves as the official, tamper-proof timestamp. Most blockchain explorers can be used to independently verify this entry.

75%

of consumers avoid brands they don't trust with their data—integrity is key.*

1. IBM Security / Ponemon Institute: Cost of a Data Breach Report. (Stolen credentials remain the primary attack vector at 19%).
2. Gartner / Vercara Research: Consumer Trust in Data Privacy Survey. (75% of consumers terminate relationships due to lack of trust).
